FEED THE WORLD

(Photographs from Google images)
Lack or excess of food in maps:

[World map showing percentage of population undernourished in different countries.]

Obesity spreads across the globe:

People who are overweight (possessing a body mass index, or BMI, of 25 or higher) or obese (a BMI of 30 or higher) are now just as common in many developing countries as they are in the U.S., Canada and Europe. In large parts of Latin America, North Africa and the Middle East, the problem has triggered an upsurge in diabetes, heart disease and other illnesses. Obesity rates are also rising quickly in China, India and other Asian nations.
Feeding the world: a necessity in the future

Expected areas of population growth and decline, 2000-2080

Ratio of population 2080/2000
- Increase
  - 1.00-1.24
  - 1.25-1.49
  - 1.50-1.74
  - 1.75-1.99
  - 2.0-2.99
  - 3.0-5.8
- Decrease
  - 0.5-0.7
  - 0.8-1.0
  - No data

Eating is first of all an affective and cultural act
